## Single banknote dispenser

### Performance

#### Reliability

- Complete detection for worn bills, double bills and folded bills
- Available to banknotes of various materials and various levels of oldness
- Electronic tag on the cassette supports status record and inquiry
- Keyed reject bin is fully enclosed for security.

#### Efficiency

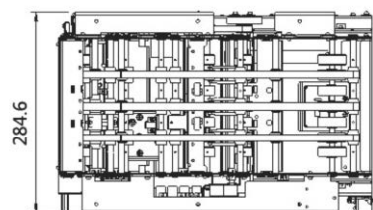

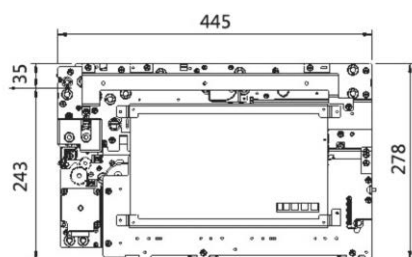

- Cassette with the large capacity of 2000 notes lowers the frequency of cash loading and decreases maintenance cost
- Dispensing speed: 4 notes per second

#### Friendly Maintenance

- Less quick-wear parts and longer service life
- Solve bill jams in need of no professional tools

#### Outline Dimension Drawing (Unit: mm)

CDM6240 has 1 cassette as standard configuration. The number of cassettes can be up to 3, with total height increased by 142.5mm for each cassette.

### Specifications

#### Bill Dispensing

- Single widthwise with a speed of 4 notes per second

#### Banknote Available

- Material : paper and polymer
- Length range:110~172mm
- Width range:55~85mm ,
- Thickness range: 0.06~0.18mm

#### Cassette

- Capacity : 2000 notes for each cassette
- Low level detection: 50~250 notes
- Equipped with magnetic ID( RFID optional)

#### Reject Bin

- Capacity : 100 notes
- Fully enclosed and isolated design with a security lock

#### Maintenance Direction

- Front/ rear access

#### Power Supply

- DC 24V±10% , 50W ( maximum )

#### Communication Interface

- RS-232 or USB

#### Weight

- 18.9kg ( standard configuration, with one cassette )
- Total weight increases by 9.9 kg for adding each cassette

#### Environment

- Working temperature: 0°C~50°C
- Working humidity: 20%~90%RH

#### MCBF

- 100,000 cycles

Design with high reliability

Easy solution of bill jams

Off-line trouble-shooting
